

Index SoundLab I, The Electronic Studio

Synthesis I

Audio frequency (AF)Oscillators

- The sine waveform
- The triangular waveform
- The sawtooth waveform
- The square waveform
- The square and pulse waveform
- The noise oscillator

Filters

- Lowpass
- Highpass
- A sweep in a high and a lowpass filter serial circuit
- Static Filter
- Static Low Pass
- Static Band Pass
- Static High Pass
- Static Filter Serial
- Static Filter Parallel
- Classic Filter
- The Nord Filter
- The Multi Filter
- Bandpass Phaser
- The Comb Filter
- One comb

Control- or modulation signals

- The Keyboard Voice module
- The Mono Key module
- The Constant module

The Low Frequency Oscillator

- LFO C
- The LFO trianglewave
- The LFO sawtoothwave
- The LFO squarewave
- The LFO random wave
- The LFO random glide
- The LFO random pulsewave
- The LFO random glide pulse

The Envelope Generator

- Four-stage ADSR
- Various Shape settings of the ADSR
- Logarithmic Attack and Exponential Decay/Release
- Linear Attack and Exponential Decay/Release
- Exponential Attack and Decay/Release
- Linear Attack and Decay/Release
- The Decay Envelope
- The Hold Envelope

Stereo Hold
The ADR Envelope
Restart tricks
The envelope loop
The ADDSR Envelope
ADDSR envelope negative inverted
Amplitude modulation of the EG module
The Keyboard module
The LevScaler module
The Mod Envelope
Our first synthesizer
More EG applications
Delayed tremolo
Delayed Tremolo and vibrato

Appendix

Shape and phase with the Pulse waveform
The Dual oscillator
The Shape A oscillator
From sine to sawtooth
From a sine- to square waveform
The Lag or Glide module
The postponed delayed vibrato
The Min-Max module
Tremolo
Pseudo-unison triangle waves
The Noise Oscillator
Creating a filter matrix
Filter modulated by audio
The percussion oscillator
Rebuilding an analogue synthesizer
The Minimoog
The Korg MS 20
The ARP 2600
The EMS Synthesi

Synthesis II

Additive synthesis

Sinusoidal Modeling
Building an instrument
Additive way for filter stacking

The Formant

Formant oscillator
Violin formant
Sync formant
FOF
Vocal filter
Talking patch
Additive synthesis and AM

FM synthesis

Bessel function

Carrier/modulator

Partials

Sidebands

Frequencies and ratio's

Bessel scaling factors

FM architectures

Self-modulating carrier

Complex FM structures

The DX operator module

FM and Sync

The DX 21

The DX 7

Oscillator Sync

Hard sync

Soft sync

Vosim

Pulse train and formants

extended Vosim

Creating an instrument

Phase distortion

FM and phase modulation

Creating waveforms

Radians

Modulating the phase

Modulation index

Cross Modulation

x-mod and filtering

Pseudo Wave-table synthesis

Wave-stacking

Envelope controlled multiplexers

Wave scanning

Physical Modeling

Modal synthesis

Pseudo=Karplus-Strong

Creating instruments

Resonators

Controlling feedback

Wave-guide Synthesis

examples

Phase-lock loop

sample&Hold

Driver

Soft sync PLL

Wave terrain synthesis

Two-variable synthesis

Wave orbit

Wavetable synthesis

cross-multiplexing

Granular synthesis

Snippets and movement

Sample & Hold

Basic

- S/H and random pitch modulation
- S/H and random filter modulation
- Tonality and S/H
- The S/H and random panorama modulation
- S/H and random sync modulation
- S/H for gain (Envelope) modulation
- Control inputs for the S/H
- S/H module in a Logic circuit
- S/H module as control for a Gate

Complex examples

- Melodic control
- The S/H module and audio signals
- Serial and parallel S/H modules
- Triggering
- Control Sampling
- Duo sampling
- Audio applications
- Phase lock
- Other triggering
- Counted S/H stack

Special Structures

- Open loop
- Switch loops
- S/H and logic
- S/H as composition tool

Amplitude and Ring modulation

Basics

- The Level Multiplier
- The Level Modulator
- The Modulation Amount module
- Amplitude Modulation
- Amplitude control

Sidebands

- Ring modulation and sidebands
- Two tone tests

RM and metal sounds

- The Ring Modulator creating tremolos
- The Ring Modulator to create an echo effect

Complex timbre examples

- Wrapped sine waveforms
- AM and RM
- RM and Sync
- AM-RM and FM

RM and filtering

- examples
- RM and control signals**

examples

RM and Logic

examples

Classic RM

examples

Logic I

Basic

Simple Gates

Half adders

Combinational logic

Full adders

Combinations

The Flip-flop module

D-type Flip-flop

S-type Flip-flop

Sequential Logic

examples

The Logic Divider module

8-Counter

Keyed triggers switches

other examples

The Logic Pulse module

examples

The Logic Delay module

examples

The BinCounter module

examples

ADConverter

examples

DAConverter

examples

Creating a shuffle model

examples

Few ideas

examples

Logic and Audio

examples

Logic as audio

examples

Autonomous logic oscillators

examples

Dance/Techno I

Basics

The Clock module

The Event Sequencer

Sound

The Pattern Generator

Trigger and pitch control

The Sequencer

Trigger and pitch control

Creating a melodic drum line

Creating chord patterns

Timing control

Creating a drum set

Using various forms of synthesis

Reset Slices

examples

Phase differences

examples

Colouring sound

examples

Big examples

Percussion synth

Bass Synth

Drum Synth

Chord Synth

Dance/Techno II

Pitch & Rhythm

The Level Sequencer

The 32-steps Sequencer

172-steps Sequencer

Triggering by key

The Snare Machine

The Hihat Machine

The Percussion Machine

Complex trigger switching

Expanding timing possibilities

Random triggering

Creating Swing

The Random Trig module

The Shuffle block

Extended for- and backwards sequencing

Individual logic triggering

Triggering and multiplexers

Glitch/IDM

Logic Delay and phase

Creating Delay slices

Creating Granular fx

The Randomizer

examples

Famous Machines

JomoX XBase

Waldorf Attack

The TTool

Pearl Syncussion

New Skool

Toxic
BassLine Pro
303

Experimental music

Random
A-tonal and tonal examples
Minimalistic
Reich and Cage like examples
Feedback composition
Creating color and manipulating feedback lines
Conceptual Sound
Daily Noises(electronic remakes)
Political
Statements
Noise-,scream- and crackle machines
Examples
Drones
Examples with phasing, RM, Resonators etc.
Music Machines
Examples

Audio Processing I

Distortion

The Clip module examples
The Overdrive module examples
The Saturation module examples
Rectifier examples
The WaveWrap module examples
The Static Shaper module examples

Compression

Examples

FX

Chorus
Phaser
Flanger
Digitizer
Ring Modulation
Carrier-modulators circuits
Single Side band suppressed carrier modulator
The Frequency shift module
Examples
The Pitch Shift module
Examples
The Scratch module
Examples
The Reverb module
Examples
Delay modules

Static Single Delay module
Inverted feedback examples
Single Delay with modulation

Acoustical movement

Dual Delay line
Creating a Flanger
Creating a phase tremolo
The Quad Delay module
Broadening sound

Creating a Reverb

The Delay Eight module
modulating delay time examples
The Clocked Delay module

Creating a resonator

Echo effects
Clocked and other constructed
Delay examples

Combinational FX

Gain manipulation
Differential distortion
Tee Bee distortion
Logic and distortion
Logic ADC Fazor
Logic bits switcher
Bit Eater
More examples

Complex Audio processing

Filter Matrix
Various sequenced FX
PLL Vocoder
Sherman Bank
Glitch FX
Examples

Tips and tricks

Goodies

For oscillators
Creating Noise
Movement
Fatter sound
Filtering
LFO trickery
ADSR circuits
Different morph curves
etc.

3ACK
